You can choose Mijardinmagico's SAP C_HRHFC_1911 exam training materials.

NEW QUESTION: 1

An Organization uses Exchange Online. You enable mailbox audit logging for all mailboxes.

User1 reports that her mailbox has been accessed by someone else.

You need to determine whether someone other than the mailbox

owner has accessed the mailbox.

What should you do?

A. Run the following Windows PowerShell command:

New-AdminAuditLogSearch-Identity User1- LogonTypes Admin, Delegate, External-ShowDetails

B. Run the following Windows PowerShell command:

Search-MailboxAuditLog-Identity User1- LogonTypes Admin, Delegate, External-ShowDetails

C. In the Exchange Admin Center, navigate to the Auditing section of the Compliance Management page.

Run a non-owner mailbox access report.

D. In the Exchange Admin Center, navigate to the Auditing section of the Protection page, run a non-owner mailbox access report.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The Non-Owner Mailbox Access Report in the Exchange Administration Center (EAC) lists the mailboxes that have been accessed by someone other than the person who owns the mailbox. Run a non-owner mailbox access report

In the EAC, navigate to Compliance Management > Auditing.

Click Run a non-owner mailbox access report.

By default, Microsoft Exchange runs the report for non-owner access to any mailboxes in the

organization over the past two weeks. The mailboxes listed in the search results have been enabled for mailbox audit logging. To view non-owner access for a specific mailbox, select the mailbox from the list of mailboxes. View the

search results in the details pane.

Note: When a mailbox is accessed by a non-owner, Microsoft Exchange logs information about this action in a mailbox audit log that's stored as an email message in a hidden folder in the mailbox being audited.

Entries from this log are displayed as search results and include a list of mailboxes accessed by a non-owner, who accessed the mailbox and when, the actions performed by the non-owner, and whether the action was successful.

NEW QUESTION: 2

A. Option B

B. Option D

- C. Option A
- D. Option F
- E. Option C
- F. Option E

Answer: D,E,F

Explanation:

Note:

* The md_restore command allows you to restore a disk group from the metadata created by the md_backup command.

/md_restore Command Purpose This command restores a disk group backup using various options that are described in this section.

/ In the restore mode md_restore, it re-create the disk group based on the backup file with all user-defined templates with the exact configuration as the backed up disk group. There are several options when restore the disk group

full - re-create the disk group with the exact configuration

nodg - Restores metadata in an existing disk group provided as an input parameter newdg - Change the configuration like

failure group, disk group name, etc..

* The MD_BACKUP command creates a backup file containing metadata for one or more disk groups. By default all the mounted disk groups are included in the backup file which is saved in the current working directory. If the name of the backup file is not specified, ASM names the file

AMBR_BACKUP_INTERMEDIATE_FILE.

NEW QUESTION: 3

Which program houses all the small business partner training resources?
