If you choose us, you will 100% pass the exam for sure, Our 300-625 training guide boosts three versions which include PDF version, PC version and APP online version.

NEW QUESTION: 1

You have a server named SQL1 that has SQL Server Integration Services (SSIS) installed. SQL1 has eight CPUs, 8 GB of RAM, RAID-10 storage, and a 10-gigabit Ethernet connection.

A package named Packagel runs on SQL1. Packagel contains 10 data tasks. Packagel queries 3 GB of data from the source system.

You review the performance statistics on SQL1 and discover that Packagel executes slower than expected.

You need to identify the problem that is causing Packagel to execute slowly.

Which performance monitor counter data should you review?

A. Processor\% User Time

- B. SQLServer:SSIS Pipeline 10.0:Buffers in use
- C. Memory\Pages/sec
- D. Processor\% Idle Time

Answer: A

Explanation:

Explanation/Reference:

The Processor: % User Time value "Corresponds to the percentage of time that the processor spends on executing user processes such as SQL Server."

In other words, this is the percentage of processor non-idle time spent on user processes. If the Processor:% User Time high values are caused by SQL Server, the reason can be non-optimal SQL Server configuration, excessive querying, schema issues, etc. Further troubleshooting requires finding the process or batch that uses so much processor time.

NEW QUESTION: 2

Which one of the following statements about testing techniques is TRUE?

- A. Test execution scheduling should give priority to experienced based testing
- B. Exploratory testing can replace black box techniques when testing time is very limited
- C. Specification based techniques can be used as a substitute for a poorly defined test basis
- D. Experienced based techniques are systematic and produce detailed test documentation

Answer: B

NEW QUESTION: 3

A security administrator is implementing a new WAF solution and has placed some of the web servers behind the WAF, with the WAF set to audit mode. When reviewing the audit logs of external requests and posts to the web servers, the administrator finds the following entry:

Based on this data, which of the following actions should the administrator take?

- A. Create an alert to generate emails for abnormally high activity.
- B. Create a blocking policy based on the parameter values.
- C. Alert the web server administrators to a misconfiguration.
- D. Change the parameter name 'Account_Name' identified in the log.

Answer: A
