We have professional experts team with decades of hands-on IT experience, committed to catch the newest and latest information about PL-400 Microsoft Power Platform Developer sure questions & answers.

As a rich-experienced dumps leader in the worldwide, FreeDumps enjoys [Dumps SnowPro-Core Free Download](#) great reputation in the IT field because of the high pass rate and high quality service, Both you and we hope you pass real test easily.

NEW QUESTION: 1

Refer to the exhibit.

A network device needs to be installed in the place of the icon labeled Network Device to accommodate a leased line attachment to the Internet. Which network device and interface configuration meets the minimum requirements for this installation?

- A. a switch with one Ethernet and one serial interface
- B. a router with two Ethernet interfaces
- C. a switch with two Ethernet interfaces

- D. a router with one Ethernet and one modem interface
- E. a router with one Ethernet and one serial interface

Answer: E

Explanation:

Only a router can terminate a leased line attachment access circuit, and only a router can connect two different IP networks. Here, we will need a router with two interfaces, one serial connection for the line attachment and one Ethernet interface to connect to the switch on the LAN.

NEW QUESTION: 2

Which of the following floors would be most appropriate to locate information processing facilities in a 6-stories building?

- A. Basement
- B. Third floor
- C. Ground floor
- D. Sixth floor

Answer: B

Explanation:

You data center should be located in the middle of the facility or the core of a building to provide protection from natural disasters or bombs and provide easier access to emergency crewmembers if necessary. By being at the core of the facility the external wall would act as a secondary layer of protection as well.

Information processing facilities should not be located on the top floors of buildings in case of a fire or flooding coming from the roof. Many crimes and theft have also been conducted by simply cutting a large hole on the roof.

They should not be in the basement because of flooding where water has a natural tendency to flow down :-). Even a little amount of water would affect your operation considering the quantity of electrical cabling sitting directly on the cement floor under under your raise floor.

The data center should not be located on the first floor due to the presence of the main entrance where people are coming in and out. You have a lot of high traffic areas such as the elevators, the loading docks, cafeteria, coffee shop, etc.. Really a bad location for a data center.

So it was easy to come up with the answer by using the process of elimination where the top, the bottom, and the basement are all bad choices. That left you with only one possible answer which is the third floor. Source: HARRIS, Shon, All-In-One CISSP Certification Exam Guide, 5th Edition, Page

Answer: B

NEW QUESTION: 4

HOTSPOT

You deploy System Center 2012 R2 Virtual Machine Manager (VMM). You configure integration between VMM and Windows Server Update Services (WSUS).

You deploy several new Hyper-V hosts. The Hyper-V hosts are managed by using VMM.

The Virtual Machine Manager console is configured as shown in the exhibit. (Click the Exhibit button.)

Use the drop-down menus to select the answer choice that completes each statement.

Answer:
