**Answer: B**

**NEW QUESTION: 2**

You have an Azure subscription that contains an Azure file share.

You have an on-premises server named Server1 that runs Windows Server 2016.

You plan to set up Azure File Sync between Server1 and the Azure file share.

You need to prepare the subscription for the planned Azure File Sync.

Which two actions should you perform in the Azure subscription? To answer, drag the appropriate actions to the correct targets. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Answer:**

Explanation:

Explanation

As per the official MS doc:

The recommended steps to onboard on Azure File Sync for the first with zero downtime while preserving full file fidelity and access control list (ACL) are as follows:

1. Deploy a Storage Sync Service. --&gt; This needs to be done on Azure .
2. Create a sync group. --&gt; This needs to be done on Azure
3. Install Azure File Sync agent on the server with the full data set. --&gt; This needs to be done on server1.
4. Register that server and create a server endpoint on the share. --&gt; This needs to be done on server1.
5. Let sync do the full upload to the Azure file share (cloud

endpoint).

6. After the initial upload is complete, install Azure File Sync agent on each of the remaining servers.

7. Create new file shares on each of the remaining servers.

8. Create server endpoints on new file shares with cloud tiering policy, if desired. (This step requires additional storage to be available for the initial setup.)

9. Let Azure File Sync agent do a rapid restore of the full namespace without the actual data transfer. After the full namespace sync, sync engine will fill the local disk space based on the cloud tiering policy for the server endpoint.

10. Ensure sync completes and test your topology as desired.

11. Redirect users and applications to this new share.

12. You can optionally delete any duplicate shares on the servers.

First action: Create a Storage Sync Service

The deployment of Azure File Sync starts with placing a Storage Sync Service resource into a resource group of your selected subscription.

Second action: Create a sync group

A sync group defines the sync topology for a set of files.

Endpoints within a sync group are kept in sync with each other.

A sync group must contain one cloud endpoint, which represents an Azure file share and one or more server endpoints. A server endpoint represents a path on a registered server. A server can have server endpoints in multiple sync groups. You can create as many sync groups as you need to appropriately describe your desired sync topology.

Third action: Run Server Registration

Registering your Windows Server with a Storage Sync Service establishes a trust relationship between your server (or cluster) and the Storage Sync Service. A server can only be registered to one Storage Sync Service and can sync with other servers and Azure file shares associated with the same Storage Sync Service. ) Reference:
