NEW QUESTION: 1

You work for a finance company.

You need to design a business network analysis solution that meets the following requirements:

Analyzes the flow of transactions between the Azure environments of the company's various partner organizations
Supports Gremlin (graph) queries
What should you include in the solution?

- A. Azure Cosmos DB
- B. Azure Data Lake Storage Gen2
- C. Azure Synapse
- D. Azure Analysis Services

Answer: A

Explanation:

Gremlin is one of the most popular query languages for exploring and analyzing data modeled as property graphs. There are many graph-database vendors out there that support Gremlin as their query language, in particular Azure Cosmos DB which is one of the world's first self-managed, geo-distributed, multi-master capable graph databases.

Azure Synapse Link for Azure Cosmos DB is a cloud native hybrid transactional and analytical processing (HTAP) capability that enables you to run near real-time analytics over operational

data. Synapse Link creates a tight seamless integration between Azure Cosmos DB and Azure Synapse Analytics.
