Just think that you just need to spend certain money, **AD0-E453 Reliable Braindumps Free** you can obtain the certification, it's quite cost-efficiency, No need of running after unreliable sources such as free courses, online AD0-E453 courses for free and AD0-E453 dumps that do not ensure a passing guarantee to the AD0-E453 exam candidates.

We not only provide all candidates with high pass rate study materials, but also provide them with good service, If you pass AD0-E453 test dump you will have a good reputation and AD0-E453 Latest Dumps Ebook considerable salary and make friends with different successful men in the bright future.

Our AD0-E453 exam study dump is the most professional.

#### **NEW QUESTION: 1**

Which of the following is NOT a key recovery method?

- A.** A message is encrypted with a session key and the session key is, in turn, encrypted with the private key of a trustee agent. The encrypted session key is sent along with the encrypted message. The trustee, when authorized, can then decrypt the message by recovering the session key with the trustee's public key.
- B.** A message is encrypted with a session key and the session key is, in turn, encrypted with the public key of a trustee agent. The encrypted session key is sent along with the encrypted message. The

trustee, when authorized, can then decrypt the message by recovering

the session key with the trustee's private key.

**C.** A message is encrypted with a session key. The session key, in turn, is broken into parts and each part is encrypted with the public key of a different trustee agent. The encrypted parts of the session key

are sent along with the encrypted message. The trustees, when authorized, can then decrypt their portion of the session key and

provide their respective parts of the session key to a central agent.

The central agent can then decrypt the message by reconstructing

the session key from the individual components.

**D.** A secret key or a private key is broken into a number of parts and

each part is deposited with a trustee agent. The agents can then

provide their parts of the key to a central authority, when presented

with appropriate authorization. The key can then be reconstructed

and used to decrypt messages encrypted with that key.

**Answer: A**

Explanation:

Encrypting parts of the session key with the private keys of the

trustee agents provides no security for the message since the message can be decrypted by recovering the key components of the session key using the public keys of the respective agents. These

public keys are available to anyone.

The other answers are valid means of recovering keys, since key recovery refers to permitting access to encrypted messages under predefined circumstances.

Two of these answers are also called key encapsulation since the session key is encapsulated in the public keys of the trustee agents and, therefore, can be decrypted only by these trustee agents with their private keys.

## **NEW QUESTION: 2**

Some judicial circuits use a multifactor test to determine whether compensation is reasonable or excessive. For example, the Ninth Circuit has used a five-factor test. Which of the following is out of those factors?

**A.** Compensation paid to similarly situated employees in similar companies

**B.** All of these

**C.** The employee's role in the company

D. The character and condition of the company

**Answer: B**

**NEW QUESTION: 3**

HOTSPOT

Your company network has two branch offices. Some employees work remotely, including at public locations. You manage an Azure environment that includes several virtual networks.

All users require access to the virtual networks.

In the table below, identify which secure cross-premise connectivity option is needed for each type of user. Make only one selection in each column.

**Answer:**

Explanation:

\* A site-to-site VPN allows you to create a secure connection between your on-premises site and your virtual network.

\* A point-to-site VPN also allows you to create a secure connection to your virtual network. In a point-to-site configuration, the connection is configured individually on each client computer that you want to connect to the virtual network.

\* Use a point-to-site configuration when:

You want connect to your virtual network from a remote location. For example, connecting from a coffee shop.

You have a site-to-site connection, but have some clients that need to connect from a remote location.

References:

**NEW QUESTION: 4**

A. Option A

B. Option C

C. Option B

D. Option D

**Answer: A**

Explanation:

For security purposes, some switches require users to authenticate themselves (that is, provide credentials, such as a

username and password, to prove who they are) before gaining access to the rest of the network. A standards-based method of enforcing user authentication is IEEE 802.1X.
