NEW QUESTION: 4

ABC is a laptop manufacturing company. On an average, the company completes 10 discrete jobs daily. ABC has the following requirements:

1. When the customer returns the laptop, ABC should be in a position to identify the laptop's manufacture date and batch number.
2. Each laptop should be identified with a unique number and this should be tagged with the batch number.
3. When a customer returns a laptop, ABC decides whether it can replace it with a new laptop or repair it, by considering the age of the laptop.

ABC needs to identify the aging period of the laptop. Which setup would meet the above requirements?

- A. Using the discrete job form, the manufactured date and batch number can be identified.
- B. Enable parent lot and child lots at the organization item level. Enter the shelf life days in the item.
- C. Enable parent lot and grade control at the organization item level. Enter the shelf life days in the item.
- D. Enable lot and serial control at the organization item level. Enter the shelf life days in the item.
- E. Enable lot control at the organization item level. Set up uniqueness within inventory items in the organization parameters.

Answer: D
