<http://www.oracle.com/us/products/applications/fusion/fusion-pr-oj-port-mang-solut-brief-173079.pdf> (Page 2) Flexible Contract-Based Billing Traditional contract and billing systems enforce a rigid relationship between a project and a funding agreement, which can constrain project setup and execution. Oracle Fusion Project Portfolio Management provides a highly flexible approach to project contract-based billing via a non-exclusive relationship between multiple projects and tasks with contracts and contract lines. This means that you will have full control over defining contracts, rates and limits,

and when and how to recognize revenue and generate invoices while segregating the planning and execution of your projects.

NEW QUESTION: 3

After you deploy the RegionalSales report, users report that they cannot see product data when they receive the reports by email.

You need to ensure that the sales department managers can see all of the data.

In the report, you update the Hidden property of each group. What should you do next?

- A. When the report is initially run, select Show.
- B. When the report is initially run, select Hide.
- C. When the report is initially run, select Show or hide based on an expression. Set the expression to = (Globals!RenderFormat.IsInteractive)
- D. When the report is initially run, select Show or hide based on an expression. Set the expression to =NOT (Globals!RenderFormat.IsInteractive).

Answer: C

Explanation:

Topic 1, Tailspin Toys

Tailspin Toys is a multinational company that manufactures toys. Tailspin Toys has offices in five regions worldwide. The company sells toys at various retail stores. The company also sells toys directly to consumers through a web site.

The company has the following departments:

- * Sales
- * Distribution
- * Manufacturing

Each department has an office in each region.

The fiscal calendar of Tailspin Toys runs from June to May.

The network contains a server farm that has Microsoft SharePoint Server 2013 installed.

Existing Environment

Current Database Environment

Each department uses SharePoint team sites for internal collaboration.

All manufacturing information is stored in a relational database named Manufacturing. All sales information is stored in a relational database named Sales.

Tailspin Toys deploys SQL Server Analysis Services (SSAS) and configures SSAS to use tabular models. SSAS will be used for all sales reports.

Tailspin Toys deploys a SQL Server Reporting Services (SSRS) instance in SharePoint mode.

Sales Database

A database named Sales contains two tables named FactSales and DimProduct.

FactSales contains the following columns:

- * SalesID
- * Total Due
- * OrderDate

DimProduct contains the following columns:

- * ProductID
- * ProductName
- * ProductCategory
- * ProductSubcategory

The Sales database contains information about the products.

Most of the products have a category and a subcategory. Certain products only have a category.

A sample from DimProduct is shown in the following table.

Requirements

Security Requirements

Tailspin Toys identifies the following security requirement:

- * Sales department users must be allowed to view the sales transactions from their region only.
- * Sales department users must be able to view the contents of the manufacturing reports.
- * Manufacturing department users must be able to create new manufacturing reports.
- * Third-party and custom solutions must NOT be deployed to the reporting server.
- * Sales department users must NOT be able to create new manufacturing reports.

Planned Reporting Implementation

The manufacturing department plans to use the SSRS instance for its reports. The manufacturing department also plans to make

its reports accessible from SharePoint. All manufacturing reports will use an existing database named Manufacturing.

Reporting Requirements

Tailspin Toys identifies the following reporting requirements:

- * All reports must contain the company logo and a header that contains the date and the time that the report was executed.
- * All reports must be created by using the SQL Server Data Tools.

Manufacturing report

You plan to create a report named ManufacturingIssues.rdl. The report has the following requirements:

- * Manufacturing department managers must be able to view product issues by product type, manufacturing plant location, and error type.
- * The manufacturing department managers must be able to change views by choosing options from drop-down lists.

Sales reports

You plan to create a sales report named RegionalSales.rdl. The report has the following requirements:

- * Users must be able to view the report by using a web browser. By default, subcategories and product details must be hidden when using the browser.

- * Users must be able to subscribe to receive the report by email. The report must be sent by email as a PDF attachment.

You plan to create a quarterly sales report named QuarterSales.rdl. The report must display sales data by fiscal quarter.

Technical Requirements

Tailspin Toys identifies the following technical requirements:

- * Products in the DimProduct table that do NOT have a subcategory must use the category value as the subcategory value.
- * SSRS must NOT connect to databases more frequently than once every 30 minutes.
- * Sales department users must be able to use Microsoft Excel to browse tabular data.

NEW QUESTION: 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Margie's Travel is an international travel and bookings management service. The company is expanding into restaurant bookings. You are tasked with implementing Azure Search for the restaurants listed in their solution.

You create the index in Azure Search.

You need to import the restaurant data into the Azure Search service by using the Azure Search NET SDK.

Solution:

1. Create a SearchServiceClient object to connect to the search index.
2. Create a DataContainer that contains the documents which must be added.
3. Create a DataSource instance and set its Container property to the DataContainer.
4. Set the DataSource property of the SearchServiceClient

Does the solution meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Explanation

Use the following method:

- * Create a SearchIndexClient object to connect to the search index
- * Create an IndexBatch that contains the documents which must be added.
- * Call the Documents.Index method of the SearchIndexClient and pass the IndexBatch.
