Explanation:

NEW QUESTION: 2

You deploy an application that performs sentiment analysis on the data stored in Azure Cosmos DB.

Recently, you loaded a large amount of data to the database.

The data was for a customer named Contoso. Ltd.

You discover that queries for the Contoso data are slow to complete, and the queries slow the entire application.

You need to reduce the amount of time it takes for the queries to complete. The solution must minimize costs.

What is the best way to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Migrate the data to the Cosmos DB database.
- B. Change the requests units.
- C. Change the partitioning strategy.
- D. Change the transaction isolation level.

Answer: B,D

Explanation:

Topic 1, Contoso Case Study: 1

Overview

Contoso. Ltd. has an office in New York to serve its North American customers and an office in Paris to serve its European customers.

Existing Environment

Contoso. Ltd. has an office in New York to serve its North American customers and an office in Paris to serve its European customers.

Infrastructure

Each office has a small data center that hosts Active Directory services and a few off-the-shelf software solutions used by internal users.

The network contains a single Active Directory forest that contains a single domain named contoso.com.

Azure Active Directory (Azure AD) Connect is used to extend

identity management to Azure.

The company has an Azure subscription. Each office has an Azure ExpressRoute connection to the subscription. The New York office connects to a virtual network hosted in the US East 2 Azure region. The Paris office connects to a virtual network hosted in the West Europe Azure region.

The New York office has an Azure Stack Development Kit (ASDK) deployment that is used for development and testing.

Current Business Model

Contoso has a web app named Bookings hosted in an App Service Environment (ASE). The ASE is in the virtual network in the East US 2 region. Contoso employees and customers use Bookings to reserve hotel rooms.

Data Environment

Bookings connects to a Microsoft SQL Server database named hotelDB in the New York office.

The database has a view named vwAvailability that consolidates columns from three tables named Hotels, Rooms, and RoomAvailability. The database contains data that was collected during the last 20 years.

Problem Statements

Contoso identifies the following issues with its current business model:

- * European users report that access to Bookings is slow, and they lose customers who must wait on the phone while they search for available rooms.
- * Users report that Bookings was unavailable during an outage in the New York data center for more than 24 hours.

Requirements

Contoso identifies the following issues with its current business model:

- *European users report that access to Bookings is slow, and they lose customers who must wait on the phone while they search for available rooms.

Business Goals

*Users report that Bookings was unavailable during an outage in the New York data center for more than 24 hours.

Contoso wants to provide a new version of the Bookings app that will provide a highly available, reliable service for booking travel packages by interacting with a chatbot named Butler. Contoso plans to move all production workloads to the cloud.

Technical Requirements

Contoso identifies the following technical requirements:

- *Data scientists must test Butler by using ASDK.
- *Whenever possible, solutions must minimize costs.
- *Butler must greet users by name when they first connect.
- *Butler must be able to handle up to 10,000 messages a day.
- *Butler must recognize the users' intent based on basic utterances.
- *All configurations to the Azure Bot Service must be logged centrally.
- *Whenever possible, solutions must use the principle of least privilege.

*Internal users must be able to access Butler by using Microsoft Skype for Business.

*The new Bookings app must provide a user interface where users can interact with Butler.

*Users in an Azure AD group named KeyManagers must be able to manage keys for all Azure Cognitive Services.

*Butler must provide users with the ability to reserve a room, cancel a reservation, and view existing reservations.

*The new Bookings app must be available to users in North America and Europe if a single data center or Azure region fails.

*For continuous improvement, you must be able to test Butler by sending sample utterances and comparing the chatbot's responses to the actual intent.

NEW QUESTION: 3

A technician must copy data over an unreliable network connection. Which of the following tools will BEST satisfy this requirement?

- A. ROBOCOPY
- B. FDISK
- C. XCOPY
- D. FTP

Answer: A

NEW QUESTION: 4

The administrator's network has OSPF for the internal routing protocol. One port going out to the Internet is congested. The data is going out to the Internet, but queues up before sending. Which of the following would resolve this issue?

Output:

```
Fast Ethernet 0 is up, line protocol is up
Int ip address is 10.20.130.5/25
MTU 1500 bytes, BW10000 kbit, DLY 100 usec
Reliability 255/255, Tx load 1/255, Rx load 1/255
Encapsulation ospf, loopback not set Keep alive 10
Half duplex, 100Mb/s, 100 Base Tx/Fx
Received 1052993 broadcasts
0 input errors
983881 packets output, 768588 bytes
0 output errors, 0 collisions, 0 resets
```

- A. Change the slash notation
- B. Change duplex to full
- C. Change the IP address
- D. Set the loopback address

Answer: B
