It contains RedHat EX342 exam questions and answers, All the Products are fully updated, But pass this test will not be easy, If you want to pass RedHat EX342 exam and get a high paying job in the industry; if you are searching for the perfect EX342 exam prep material to get your dream job, then you must consider using our Red Hat Certified Specialist in Linux Diagnostics and Troubleshooting exam exam products to improve your skillset.

If you follow the steps of our EX342 exam questions, you can easily and happily learn and ultimately succeed in the ocean of learning.

NEW QUESTION: 1

You have a server that runs Windows Server 2003 Service Pack 2 (SP2). You have a third party hardware device installed. The device uses a third party driver. The device works properly.

The driver's hardware manufacturer provides a new device driver. You update the device driver, but the device fails to work.

You need to ensure that you can use the new hardware device. What should you do?

- A. From Device Manager, uninstall the device and then restart the server.
- B. From Device Manager, disable the device and then click Scan for hardware changes.
- C. From the properties of the device, select Roll Back Driver.
- D. Connect to Windows Update and install all driver updates.

Answer: C

NEW QUESTION: 2

What is the framework leveraged in a number of product features to accommodate customization of core transaction business logic called?

- A. notification

- B. data extension
- C. external rules
- D. response constructor

Answer: C

NEW QUESTION: 3

Review the ZFS dataset output that is displayed on your system:
Which four correctly describe the output?

- A. /data/file4 has been added.
- B. The link /data/file3 has been added.
- C. /data/file5 has been modified.
- D. /data/file3 (a link) has been removed.
- E. /data/file1 has been modified and is now smaller.
- F. /data/file4 has been modified and is now larger.
- G. /data/file1 has been deleted.
- H. /data/file3 has been renamed to /data/file13.

Answer: A,C,G,H

Explanation:

A: + Indicates the file/directory was added in the later dataset

C:R Indicates the file/directory was renamed in the later dataset

E: - Indicates the file/directory was removed in the later dataset

G: M Indicates the file/directory was modified in the later dataset

Note:Identifying ZFS Snapshot Differences (zfs diff)

You can determine ZFS snapshot differences by using the zfs diff command.

The following table summarizes the file or directory changes that are identified by the zfs diff command.

File or Directory Change Identifier

*File or directory is modified or file or directory link changed M

*File or directory is present in the older snapshot but not in the newer snapshot -

*File or directory is present in the newer snapshot but not in the older snapshot +

*File or directory is renamed R

NEW QUESTION: 4

After typing in a new command and pressing enter, you receive an error message indicating incorrect syntax. This error message originated from?

- A. The operating system.
- B. The kernel.
- C. The command.

D. The shell.

Answer: C

Explanation:

When you run a 'command' you are actually instructing the shell to run a program. If the shell can find the program, it will run it. The shell knows how to start the program, but it doesn't know the syntax of the program/command. If you get an error saying 'incorrect syntax', the error will be coming from the program.

Incorrect Answers

A:The shell knows how to start the program, but it doesn't know the syntax of the program/command. A shell error message would be for example, '<command>: Command not found.'

B:The operating system runs the shell. It doesn't know about specific commands.

D:The kernel is effectively the operating system. It doesn't know about specific commands.
